Modalities and modal logic

What is a modality?

1: ...

2: the classification of logical propositions according to their asserting or denying the possibility, impossibility, contingency, or necessity of their content

3/4: ...

(from *Merriam-Webster's Online Dictionary*)

Modalities and modal logic

Modal logic?

Modal logic can be viewed broadly as the logic of different sorts of modalities, or modes of truth: alethic (“necessarily”), epistemic (“it is known that”), deontic (“it ought to be the case that”), or temporal (“it has been the case that”) among others . . . In the strict sense however, the term “modal logic” is reserved for the logic of the alethic modalities.

(from *Stanford Encyclopedia of Philosophy*)

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Basic modal logic

Modal operators:

$\Box\varphi$ it is necessarily the case that φ

$\Diamond\varphi$ it is possibly the case that φ

Examples:

■ $\Diamond\Box\Diamond\varphi$

■ $\Diamond(\varphi \wedge \Diamond\psi)$

■ $\Box(\varphi \rightarrow \psi) \rightarrow (\Box\varphi \rightarrow \Box\psi)$

Question:

Which formulae are satisfiable, which are logically valid?

[Organization](#)

Basic modal logic

Modal operators:

$\Box\varphi$ it is necessarily the case that φ

$\Diamond\varphi$ it is possibly the case that φ

Interpretation:

- relational structures
- topological spaces
- modal algebras

Wise men puzzle

The story ...

A king wishes to test his three wise men. The three wise men are arranged in a circle so that they can see and hear each other.

The king announces to them that there are three red hats and two white hats. The king puts a hat on the head of each of the three wise men and asks them sequentially: “Do you know the color of the hat on your head?”.

The first and then the second wise men answer that they do not know, but the third answers that he does know.

Which color has the hat of the third wise man?

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Doxastic / epistemic logic

Modal operators:

$B_a\varphi$ agent a holds φ true

$B_a(\varphi, \psi)$ ψ is a reason for a to believe φ

$K_a\varphi$ agent a knows φ

$K\varphi$ it is known that φ is true

$C_\gamma\varphi$ among the members of group γ it is common knowledge that φ

Interpretation:

- relational structures
- belief sets (set filters)
- probability functions

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Deontic logic

Modal operators:

$O_a\varphi$ agent a is obliged to make φ true

$O_a(\varphi, \psi)$ given ψ , a is obliged to make φ true

$O\varphi$ φ should be true

$A\varphi$ φ is allowed

$F\varphi$ φ is forbidden

Interpretation:

- relational structures (normatively optimal worlds?)
- utility functions

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Temporal logic

Modal operators:

$F\varphi$ sometimes in the future φ will be true

$G\varphi$ always in the future φ will be true

$X\varphi$ in the next state φ will be true

$U(\varphi, \psi)$ until φ will be true, ψ will be true

Interpretation:

- discrete / continuous time
- linear / branching time
- concrete flows of time $\langle \mathbb{N}, <_{\mathbb{N}} \rangle$, $\langle \mathbb{Q}, <_{\mathbb{Q}} \rangle$, $\langle \mathbb{R}, <_{\mathbb{R}} \rangle$

Introduction

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Conditional logics

Modal operators:

$\varphi \Box \rightarrow \psi$ if φ , then ψ

Interpretation:

- sphere models based on similarity relation between worlds (Lewis, 1973)

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Probabilistic modal logics

Modal operators:

$\square_p \varphi$ in the next step, φ will be true with probability $\geq p$

Interpretation (Larsen and Skou, 1991):

- probabilistic transition systems

Introduction

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Agent logics

Modal operators:

$[\gamma]\varphi$ the group of agents, γ , has a joint strategy to guarantee that φ becomes true

Interpretation:

- non-deterministic transition systems

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic?
(rev'd)

Modal logic in CS
and AI

History of modal
logic

Topics

Organization

Example: Dynamic logics

Modal operators:

$[\alpha]\varphi$ after executing α , φ will be true

$[\alpha;\beta]\varphi$ after executing α followed by β , φ will be true

...

$[(\psi?;\alpha) \cup (\neg\psi?;\beta)]\varphi$

after executing the program “If ψ , then α ; else β ”,
 φ will be true

...

Interpretation:

- labeled transition systems

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Example: Description logic

“Modal” operators:

$\exists r.\varphi$ true for all objects x such that there exists an object y that is in relation r to x and satisfies φ

$\forall r.\varphi$ true for all objects x such that for each object y in relation r to x , φ is true for y

...

$\exists r^{-1}.\varphi$ (converse relation)

$\exists r^*.\varphi$ (reflexive and transitive closure)

$\exists(r \circ s).\varphi$ (composition)

Interpretation:

- relational structures / first-order structures

History of modal logic

Topics

Organization

Relational structures

Slogan

Modal languages are simple yet expressive languages for talking about relational structures. [BRV02]

- Modal languages extend propositional logic by further connectives (**boxes** \square and **diamonds** \diamond)
- ... which are semantically characterized in terms of **relational structures** (e.g., linear orders, transition systems)

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Slogan

Modal languages provide an internal, local perspective on relational structures. [BRV02]

- Modal formulae are evaluated at a state / possible world in a relational structure / transition system
- ... and for evaluating a formulae only those states are relevant that are accessible by a transition in the system

Introduction

Modalities

Basic modal logic?

Examples of modal logics

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Modal logics and other logics

Slogan

Modal languages are not isolated formal systems. [BRV02]

- Modal languages have corresponding (first- / second-order) languages that describe the same class of relational structures / transition systems
- ... which enables import and export of results (correspondence theory)

Introduction

Modal logics in computer science

- Specification languages for properties of reactive and distributed programs:
temporal logics (LTL, CTL, CTL^{*}), dynamic logics, . . .
- Logics for different topics in AI:
temporal logics, logics of belief/knowledge, logics of space
- Language for data and knowledge representation:
description logics

Introduction

What is modal logic? (rev'd)

Modal logic in CS and AI

History of modal logic

Topics

Organization

Model checking (verification)

- possible worlds = states of the system that we are verifying
- accessibility/reachability relation = transitions the system can make
- Modal logics are specification languages for expressing the correctness properties the system has to satisfy
 - p will hold in every future state of the system: Gp
 - p will hold infinitely often: GFp
 - Whenever p is true, q will be true later: $G(p \rightarrow Fq)$

History of modal logic

- Modal-logical principles presumably first discussed in a systematic way by [Aristotle](#) in *De Interpretatione*
For example:
 - “Necessity implies possibility”
 - Inter-definability of “it is possible that” and “it is necessary that”
 - Logical laws of modalities
- Contributions by the Megarians, the Stoics, Ockham, and Pseudo-Scotus
- Leibniz introduced the concept of [possible world](#)

History of modal logic

Anselm's argument for the existence of God (*Proslogion*, 1077/78, citation: Internet Encyclopedia of Philosophy):

[Even a] fool, when he hears of ... a being than which nothing greater can be conceived ... understands what he hears, and what he understands is in his understanding. ... And assuredly that, than which nothing greater can be conceived, cannot exist in the understanding alone. For suppose it exists in the understanding alone: then it can be conceived to exist in reality; which is greater. ... Therefore, if that, than which nothing greater can be conceived, exists in the understanding alone, the very being, than which nothing greater can be conceived, is one, than which a greater can be conceived. But obviously this is impossible. Hence, there is no doubt that there exists a being, than which nothing greater can be conceived, and it exists both in the understanding and in reality.

History of modal logic

- In the 1910s C. I. Lewis investigated modal logic as a possibility to introduce a strengthening of **material implication**.
- First semantics of modal logic introduced by A. Tarski (**topological semantics**)
- R. Carnap's suggestion (1942, 1947): Let M be a set of state descriptions. Then 'Necessarily p ' is true in s if and only if p is true in every state description in M .
- A. Prior (1957): 'It was once the case that p ' is true at instant t if and only if there is an instant t' **earlier than** t s. t. p is true at t' .
- S. Kripke (1959) introduced the concept of **accessibility relation** defined on (**possible**) **worlds**. 'Necessarily p ' is true in w if and only if p is true in every world w' **accessible** from w .

Exams

- Written or oral exam in September 2015

Course Prerequisites & Goals

Goals

- Acquiring in-depth knowledge on modal logics and related families of logics, “applications” of modal logics in AI, proof techniques, relationship between expressiveness and complexity of logical formalisms, ...
- Understanding the principles behind techniques for solving reasoning problems in modal logics
- Being able to read and understand research literature
- Being able to complete a thesis in this research area

Prerequisites

- Basic knowledge in the area of AI
- Basic knowledge in formal logic
- Basic knowledge in theoretical computer science
