

Constraint Satisfaction Problems

Introduction

Albert-Ludwigs-Universität Freiburg

UNI
FREIBURG

Stefan Wöfl, Christian Becker-Asano, and Bernhard Nebel

October 20, 2014

Introduction

Introduction

- Constraint Satisfaction Problems
- Real World Applications
- Solving Constraints
- Contents of the lecture

Organization

What is a constraint?

1 a: the act of constraining **b:** the state of being checked, restricted, or compelled to avoid or perform some action ...

c: a constraining condition, agency, or force ...

2 a: repression of one's own feelings, behavior, or actions **b:** a sense of being constrained ...

(from *Merriam-Webster's Online Dictionary*)

Usage

- In programming languages, constraints are often used to restrict the domains of variables.
- In databases, constraints can be used to specify integrity conditions.
- In mathematics, a constraint is a requirement on solutions of optimization problems.

Organization

Problem:

- How can one fill an $n \times n$ table with n different symbols
- ... such that each symbol occurs exactly once in each row and in each column?

$$\begin{bmatrix} 1 \end{bmatrix} \quad \begin{bmatrix} 1 & 2 \\ 2 & 1 \end{bmatrix} \quad \begin{bmatrix} 1 & 2 & 3 \\ 2 & 3 & 1 \\ 3 & 1 & 2 \end{bmatrix} \quad \begin{bmatrix} 1 & 2 & 4 & 3 \\ 2 & 3 & 1 & 4 \\ 3 & 4 & 2 & 1 \\ 4 & 1 & 3 & 2 \end{bmatrix}$$

There are 56 different *reduced* Latin squares of size 5, 9408 squares of size 6, 16.942.080 squares of size 7, 535.281.401.856 squares of size 8, ...

Eight queens puzzle

Problem:

- How can one put 8 queens on a standard chess board (8×8 -board)
- ... such that no queen can attack any other queen?

Solutions:

- The puzzle has **12 unique solutions** (up to rotations and reflections)

- Old problem proposed in 1848.
- Various variants
 - knights (instead of queens)
 - 3D
 - n queens on an $n \times n$ -board

Definition

A **constraint network** is defined by:

- a finite set of **variables**
- a (finite) domain of **values** for each variable
- a finite set of **constraints** (i.e., binary, ternary, ... relations defined between the variables)

Problem

Is there a **solution** of the network, i.e., an assignment of values to the variables such that all constraints are satisfied?

Problem:

- Can one color the nodes of a given graph with k colors
- ... such that all nodes connected by an edge have different colors?

Reformulated as a constraint network:

- **Variables:** the nodes of the graph
- **Domains:** “colors” $\{1, \dots, k\}$ for each variable
- **Constraints:** nodes connected by an edge must have different values

This constraint network has a particular restricted form:

- only **binary** constraints
- domains are **finite**

SAT

Given a propositional logic formula in CNF, is the formula satisfiable?

As a constraint satisfaction problem:

Problem instance (Boolean constraint network):

- **Variables:** (propositional) variables;
- **Domains:** truth values $\{0, 1\}$ for each variable;
- **Constraints:** defined by a clause in the formula.

Example: $(x_1 \vee \neg x_2 \vee \neg x_3) \wedge (x_1 \vee x_2 \vee x_4)$

Traveling salesperson problem

Traveling salesperson problem (TSP):

Given a set of n cities and distances c_{ij} between city i and city j , find the shortest route that visits all cities and finishes in the starting city.

TSP is not a constraint satisfaction problem, but a constraint optimization problem

In practice, not only constraint satisfaction, but constraint optimization is required.

Seminar topic assignment

- Given n students who want to participate in a seminar; m topics are available to be worked on by students; each topic can be worked on by at most one student, and each student has preferences which topics s/he would like to work on;
- ... how to assign topics to students?

CSP/COP techniques can be used in

- *civil engineering* (design of power plants, water and energy supply, transportation and traffic infrastructure)
- *mechanical engineering* (design of machines, robots, vehicles)
- digital circuit *verification*
- automated timetabling
- air traffic control
- finance

Theorem

It is NP-hard to decide solvability of CSPs.

Since k -colorability (SAT, 3SAT) is NP-complete, solvability of CSPs in general must be NP-hard.

Question: Is CSP solvability *in* NP?

Literature

Goals

- Acquiring skills in constraint processing
- Understanding the principles behind different solving techniques
- Being able to read and understand research literature in the area of constraint satisfaction
- Being able to complete a project (thesis) in this research area

Prerequisites

- Basic knowledge in the area of AI
- Basic knowledge in formal logic
- Basic knowledge in theoretical computer science

Exercise assignments

- handed out on *Wednesdays*
- due on *Wednesday* in the following week (before the lecture)
- may be solved in groups of **two** students
- 50 % of reachable points are required for exam admission

Implement a CSP solver ...

- Implementation tasks are specified on a regular basis (depending on the progress of the lecture)
- Programming language
- Implementation should compile on a standard Linux computer (Ubuntu 13.08)
- We provide git repositories for source code
- Working solver is prerequisite for exam admission
- We will do a competition between solvers at the end of the lecture
