# Motivation

---

- Main problem with **semantic networks** and **frames**  
... the lack of **formal semantics!**
  - Disadvantage of simple **inheritance networks**  
... concepts are atomic and do not have any **structure**
- ~> Brachman's **structural inheritance networks** (1977)

# Structural inheritance networks

---

- Concepts are **defined/described** using a small set of well-defined operators
- Distinction between **conceptual** and **object-related** knowledge
- Computation of **subconcept relation** and of **instance relation**
- **Strict inheritance** (of the entire structure of a concept): inherited properties cannot be overridden

# Informal example

---

**Male** is: the opposite of female  
A **human** is a kind of: living entity  
A **woman** is: a human and a female  
A **man** is: a human and a male  
A **mother** is: a woman with at least one child that is a human  
A **father** is: a man with at least one child that is a human  
A **parent** is: a mother or a father  
A **grandmother** is: a woman, with at least one child that is a parent  
A **mother-wod** is: a mother with only male children

# Informal example

---

**Male** is: the opposite of female  
A **human** is a kind of: living entity  
A **woman** is: a human and a female  
A **man** is: a human and a male  
A **mother** is: a woman with at least one child that is a human  
A **father** is: a man with at least one child that is a human  
A **parent** is: a mother or a father  
A **grandmother** is: a woman, with at least one child that is a parent  
A **mother-wod** is: a mother with only male children

Elizabeth is a woman  
Elizabeth has the child  
Charles  
Charles is a man  
Diana is a mother-wod  
Diana has the child William

*Possible Questions* :  
Is a grandmother a parent?  
Is Diana a parent?  
Is William a man?  
Is Elizabeth a mother-wod?

# Some reasoning services

---

- Does a description  $C$  make sense at all, i.e., is it **satisfiable**?  
A concept description  $C$  is **satisfiable**, if there exists an interpretation  $\mathcal{I}$  such that  $C^{\mathcal{I}} \neq \emptyset$ .

# Outlook

---

- Can we **reduce** the reasoning services to perhaps just one problem?
- What could be **reasoning algorithms**?
- What can we say about **complexity** and **decidability**?
- What has all that to do with **modal logics**?
- How can one build **efficient systems**?
