

Multi-Agent Systems

Albert-Ludwigs-Universität Freiburg

UNI
FREIBURG

Bernhard Nebel, Felix Lindner, and Thorsten Engesser

Winter Term 2018/19

Prof. Dr. Bernhard Nebel Room 52-00-028

Phone: 0761/203-8221

email: nebel@informatik.uni-freiburg.de

Dr. Felix Lindner Room 52-00-043

Phone: 0761/203-8251

email: lindner@informatik.uni-freiburg.de

Thorsten Engesser Room 52-02-019

Phone: 0761/203-8278

email: engesser@informatik.uni-freiburg.de

Where

Building 101, Room 01-014

When

Monday 16 – 18, Wednesday 16 – 17

Web page

<http://gki.informatik.uni-freiburg.de/teaching/ws1819/multiagent-systems/>

Where

Building 101, Room 01-014

When

Thursday 17 – 18

- Exercises will be handed out and posted on the web page the day of the Wednesday lecture.
- You work in groups of size 2–3.
- Each group hands in one solution (in English or in German).
- Solutions to previous week's exercise sheet have to be handed in until Wednesday 16:00 to
 - Thorsten Engesser, engesser@informatik.uni-freiburg.de

- **Admission to the exam:** you must reach at least 50% of the points on exercises.
- An oral or written examination takes place in the semester break.
- The examination is obligatory for all Bachelor students (oral) and Master students (oral or written).

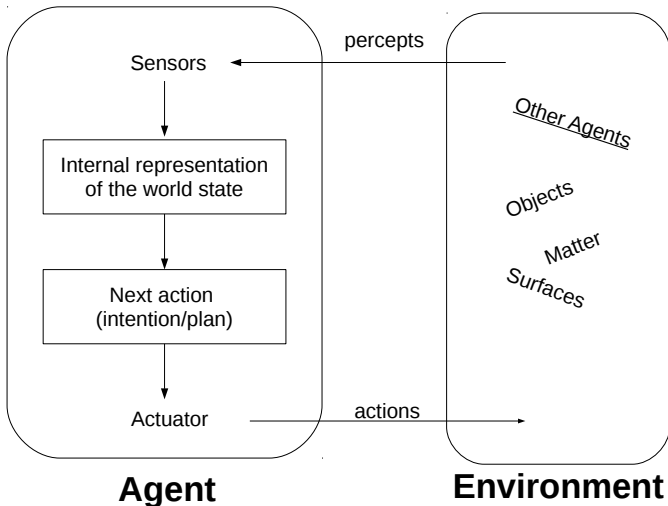

Goals

- You can read and understand MAS research literature
- You can formulate problems as multi-agent problems
- You know about MAS algorithms and some of their formal properties
- You can complete a project/thesis in this research area

Helpful

- Basic knowledge in the area of AI
- Basic knowledge in formal logics

Agents: Standard View

Which of these entities qualify as agents:

- Human beings
- Animals
- Plants
- (Non-)Self-driving cars
- Light switches
- Tables

Shoham, Layton-Brown, 2009

Multiagent systems are those systems that include multiple autonomous entities with either diverging information or diverging interests, or both.

- Video: Cooperation
- Common goal, different local views, different capabilities
- Cooperation, Communication protocol, Assembly

Agent-oriented paradigm versus Object-oriented paradigm

- “Objects do it for free; agents do it for money.” (Jennings, Sycara, Wooldridge, 1998)
- “Objects do it because they have to; agents because they want to.” (Joseph, Kawamura, 2001)
- Objects are passive service providers but agents are:
 - autonomous: Decide themselves whether or not to perform an action
 - smart: reactive, pro-active, social behavior
 - active: MAS is inherently multi-threaded (at least one thread per agent)
- (However, this does not imply that agents cannot be implemented in an OOP framework; actually, they are most of the time.)

- Distributed/Concurrent Systems
 - Similarity: Agents too are autonomous systems capable of making independent decisions → need for mechanisms to synchronize and coordinate at run time
- Economics/Game Theory
 - Game theory is heavily used in MAS, but
 - MAS is more concerned with computational aspects in context of resource-bounded agents
 - Some assumptions (such as rational agency) may not entirely match with requirements of some kinds of artificial agents
- Artificial Intelligence
 - MAS often seen as a sub-field of AI
 - Historically, MAS stresses the **social** aspect of agency more than classical AI does

Course outline

- | | | | |
|----|---|----|--|
| 1 | 15.10.2018: Introduction, Recap Prop. Logic | 1 | 03.12.2018: MAPF |
| 2 | 17.10.2018: Recap Prop. Logic | 2 | 05.12.2018: MAPF |
| 3 | 22.10.2018: Modal Logic for MAS | 3 | 10.12.2018: MAPF |
| 4 | 24.10.2018: Modal Logic for MAS | 4 | 12.12.2018: MAPF |
| 5 | 29.10.2018: Modal Logic for MAS | 5 | 17.12.2018: Programming BDI Agents |
| 6 | 31.10.2018: Epistemic Logic | 6 | 19.12.2018: Programming BDI Agents |
| 7 | 05.11.2018: Epistemic Logic | 7 | 07.01.2019: Programming BDI Agents |
| 8 | 07.11.2018: Muddy Children & Public Announcements | 8 | 09.01.2019: Programming BDI Agents |
| 9 | 12.11.2018: Speech Acts | 9 | 14.01.2019: Distributed CSP |
| 10 | 14.11.2018: Speech Acts | 10 | 16.01.2019: Distributed CSP |
| 11 | 19.11.2018: Deontic Logic | 11 | 21.01.2019: Coalitional Game Theory |
| 12 | 21.11.2018: Deontic Logic | 12 | 23.01.2019: Coalitional Game Theory |
| 13 | 26.11.2018: BDI Logic | 13 | 28.01.2019: Responsibility & Blame |
| 14 | 28.11.2018: BDI Logic | 14 | 30.01.2019: Responsibility & Blame |
| | | 15 | 04.02.2019: Responsibility & Blame |
| | | 16 | 06.02.2019: Final Session, Evaluation, Q & A |

- A significant part of this lecture will be about **representations** of what agents **know**, **belief**, **intend**, and **ought to do**; and about ways to **reason** about such representations.
- Logic is one of the best developed systems for **knowledge representation and reasoning**.
- Logic can be used for analysis, design, specification, and implementation.
- Understanding formal logic is a prerequisite for understanding much of MAS research.

- Factual knowledge: Deriving knowledge from a given knowledge base to determine what to do next.
 - Because Tina knows that it is raining, she takes an umbrella with her.
- Knowledge about knowledge: Deriving what other agents know.
 - Because Tina knows that Ben knows that it is raining, Tina knows that it is raining.
- System level: Distributed knowledge and common knowledge.
 - Tina knows that it is raining. Ben knows that if it is raining, then the street gets wet. Together, they know that the street is wet.

- Agents can communicate with other agents thereby causing changes of other agent's knowledge.
- E.g., if both Tina announces the fact **it is raining** and Ben announces the rule **if it is raining, then the street gets wet**, then it is **common knowledge** that the street is wet.
- Other types of speech acts: Request, CauseToWant, ...

- Cohen & Levesque's logic for Beliefs, Desires, Intentions
- The GOAL Agent Programming Framework (Koen Hindriks, TU Delft <https://goalapl.atlassian.net/wiki/>)

- Socialization is the process of internalizing the norms and ideologies of society, e.g., Kohlberg (1996):
 - Pre-conventional phase
 - Conventional phase
 - Post-conventional phase
- Modal logics for obligations, permissions, prohibitions
- Brief outlook on machine ethics

- Multi-Agent Path Finding (Prof. Nebel)
- Distributed Constraint Satisfaction
- Cooperative Games: Distributing value among group members (Optimality & Fairness)

- When agents bring about new states of the world together, then the question arises who is responsible for good/bad aspects of that new world state.
- Basic idea based on **counterfactuality**: If agent A had not done X, then Y would not have occurred.
